

PH BUFFERED

Our unique pH buffering system is built into MANTIS™ ensuring that the pH range always stays within pH 5.2 - 6.2 and is set at 5.7 for optimal nutrient uptake at all times.

ALL-IN-ONE

Great care was taken in formulating our nutrient blend to provide a single concentrated product that will fully nourish the cannabis crop in all stages of development.

MANTIS
BUFFERED NUTRIENTS

MANTIS™ combines up to 15 different products offered through conventional systems into one ultra-concentrated product. Use 5 mL of MANTIS™ with every 995 mL of water.

CONCENTRATED

Just add MANTIS™ Buffered Nutrients to water and use with your growing substrate of choice. Less MANTIS™ is needed with substrates pre-stocked with nutrients.

ANY SUBSTRATE
